Dependable Service & Design

Artistic Concrete Transformations is a full service concrete restoration and repair company that TRANSFORMS concrete into a brand new and appealing surface. This transformation is a technical process that goes above and beyond what a typical "painter" or garage coatings contractor would provide. From residential garage floors to large industrial warehouses, our mission is to totally transform concrete into a more functional and aesthetically pleasing surface that will reward the client for a lifetime.

Metallic Marble Epoxy Floor

Industrial Coatings

Artistic Concrete Transformations can provide you with a custom industrial finish to achieve your unique goals and needs. Our specialists can find the right product to provide your location with a dense surface that is resistant to bacteria and moisture and easy to clean. We also offer products that are resistant to chemicals and oils. Special additives can be used to provide reflective properties, anti-slip surfaces and more. Call us today to discuss the many factors that are crucial to installing a lasting industrial epoxy floor.

Concrete Sealants

Besides the obvious damage caused by salt & ice-melting chemicals, there are plenty of other things that are damaging your concrete right now, (lawn fertilizer, oil, gas, anti-freeze, UV rays, rain containing high amounts of nitric and sulfuric acids).

YOU NEED TO PROTECT YOUR CONCRETE WITH A PENETRATING SEALER.

At Artistic, we carefully power wash and deep clean your surface using a self contained scrubber. This keeps the debris from flying onto your home and property. The dirt is literally pulled out of the pores of the concrete. This perfectly prepares your concrete so that dirt and debris will not keep the concrete from absorbing the penetrating sealant.

Concrete Polishing

Artistic Concrete Transformations specializes in high volume, industrial and commercial concrete polishing. Our state-of-the-art grinders and polishers ensure the best possible results and create a concrete surface that provides a high durability shine along with many other benefits. Companies across the nation are rethinking their floor finishing needs after seeing the advantages polished concrete has over other traditional flooring options.

Top 5 Reasons Why You Should Choose Polished Concrete For Your Flooring Needs

- 1. Lower Lifetime Cost** - One of the benefits of polished concrete is the low maintenance cost. Polished concrete floors are easy to clean, eliminates the need for waxes and coatings in addition to the the cost of labor to apply them.
- 2. Improved Reflectivity and Ambient Lighting** - The reflective properties of a polished concrete floor increases the lighting in your facility, which will reduce energy costs as well as look beautiful.
- 3. Stain Resistant** - By densifying the surface, the polishing process transforms a porous concrete floor into a tightened surface dense enough to repel water, oil and other contaminants.
- 4. High Durability** - Polished floors are not as vulnerable to damage as other materials and do not need replacing.
- 5. Great Visual Appeal** - By smoothing and exposing the aggregate in the concrete, polishing provides a design that has a natural stone appeal and appears expensive and elegant.
